Table of Contents v

Keynote Talks 1

Leveraging Vision, Compliance, and Learning for Robust Robotic Manipulation in Unstructured Environments
Berk Calli 2

Towards Flexible and Efficient Learning
Sebastian Otte 3

Beyond Transformers: Linear Scaling, In-Context Learning, and the xLSTM Paradigm
Sebastian Böck 4

AI in Medicine 5

Editorial: AI in Medicine
Ahmed Alshenoudy, Philipp Moser, Patrick Rockenshaub, Erich Kobler, and Hrvoje Bogunovic 6

Towards Real-Time Simulations Of Induced Electric Fields During Brain Stimulation Using Conditioned Transformers
Fabian Greifeneder, Dominik Freinberger, and Philipp Moser 8

Disentangling Overfitting From Biological Signal: A Responsible AI Framework for IBS Analysis
Nathanya Satriani 12

CavitOmiX: A Proteome-Wide AI Framework for Structure-Based Off-Target Prediction, Drug Repurposing, and Antiviral Discovery
Michael Hetmann 17

Generating Realistic and Accurate SMPL Body Shapes from Anthropometric Measurements
Maja Nikolic, Sophie Kaltenleithner, Ulrich Bodenhofer, and Michael Giretzlehner 21

Quantifying and Mitigating Sycophantic Bias in Medical Diagnostic LLMs
Nathanya Satriani 26

Flow Matching for Conditional MRI-CT and CBCT-CT Image Synthesis
Arnela Hadzic, Simon Johannes Joham, and Martin Urschler 31

Evidential Deep Learning for Missing Boundary Detection in Topologically Constrained OCT Layer Segmentation
Botond Fazekas and Hrvoje Bogunovic 37

Evaluation of Anatomical Shape Priors in Deep Learning-Based Cardiac Multi-Compartment Segmentation
Michael Hudler, Franz Thaler, and Martin Urschler 43

LigForge: Physics-Informed Diffusion for Structure-Based Drug Design
Tobias Schopper 48

Forecasting individual survival in irregularly sampled patient trajectories
Daniel Sobotka, Nino Bogveradze, Lucian Beer, Philipp Seeböck, Helmut Prosch, and Georg Langs 50

Multimodal Contrastive Learning for Alzheimer's Disease Prediction in Imaging Genetics
Jonas Fallmann and Erich Kobler 55

xLSTM for Irregular Multivariate Clinical Time-Series Forecasting
Laura Legat and Erich Kobler 61

Applied Vision 67

Editorial: Applied Vision
Harald Ganster, Florian Kleber, Roland Perko, Gernot Stübl, and Martina Uray 68

Obstacle Detection Pipeline using Monocular Depth Estimation in Mobile Robotics
Christian Schweighofer and Michael Zauner 72

AI-Based Optimization of Roadside Mowing Operations in Austria
Roland Perko, Stefanie Onsori-Wechtitsch, Helmut Neuschmied, Peter Schallauer, Katharina Hofer-Schmitz, and Michaela Stolz 78

Synthetic Skeletal Pose Pre-training to Mitigate Data Scarcity in In-Cabin 2D-to-3D Pose Lifting
Thummanoon Kunanuntakij, Dominik Schörkhuber, and Margrit Gelautz . . 83

Organ Level Representation Learning for Region Based Medical Image Retrieval
Donghwan Lee and Wooju Kim 89

Diffusion Edge Detection Of Texture-less Objects
Matvey Ivanov, Markus Vincze, and Peter Hönig 99

Intelligent Augmentation Methods for Training Defect Detection on Circuit Boards
Olaf Kaehler, Werner Bailer, and Georg Thallinger 109

Assessing Compressive Strength of Reclaimed Clay Bricks Using SWIR Hyperspectral Imaging and Deep Learning
Jean-Philippe Andreu, Maria Jernej, Maximilian Klammer, and Benjamin Kromoser 118

GraspGen+HSR: Adapting Simulation-Trained 6-DoF Grasping to Real Service Robots Without Retraining
Alexander Dvorak, Michael Nowak, Tessa Pulli, and Markus Vincze 123

Spot and Edge Feature Based Estimation of Point-Spread Functions for Image Deconvolution
Martin Welk 133

Explainable AI for Efficient Hyperspectral Band Selection in Textile Recycling: A Score-CAM Approach
Achraf Guenounou 144

Fourier contrast optimization for occluded motion estimation
Ido Akov, Roman Pflugfelder, and Daniel Cremers 153

Effect of polarization filters on hand vein sample image quality
Christof Kauba and Andreas Uhl 158

Physics-Informed Machine Learning and Hybrid Modelling 163

Editorial: Physics-Informed Machine Learning and Hybrid Modelling
Bernhard C. Geiger, Manfred Mücke, and Stefan Posch 164

Introducing Monge-GPs: A new class of physics-informed Gaussian Processes (extended abstract)
Johanna Moser, Christopher Albert, and Sascha Ranftl 166

Joint Bayesian Inference on Lagrangian Physics and Trajectories
Michael Obermayr and Robert Peharz 170

Stabilizing PINNs: A regularization scheme for PINN training to avoid unstable fixed points of dynamical systems
Miloš Babić, Franz Rohrhofer, and Bernhard C. Geiger 176

Derivative-Enhanced Training for Data-efficient Surrogate Modeling
Paul Horvath, Marian Staggl, and Stefan Posch 185

Towards a PIRL framework for efficient airflow diffuser design
Alfredo Lopez, Florian Sobieczky, Christopher Lackner, Matthias Hochsteger, Bernhard Scheichl, Helmuth Sobieczky, and Christoph Feichtinger 194

Understanding the Role of Domain Knowledge in Bayesian Optimization under Small-Data Constraints
Bernd Schuscha, Franz Martin Rohrhofer, Bernhard C. Geiger, and Daniel Scheiber 200

Conceptual-Model-Guided Physics-Inspired Feature Engineering: A 3D-Printer Case Study
Martin Paczona 204

Equayes - Democratizing Probabilistic Model Construction and Exploration with automatic Equation to Bayesian Model transformation
Christian Findenig and Manfred Mücke 209

RoboWork 214

Editorial: RoboWork
Vedant Dave, Elmar Rueckert, Thomas Thurner, Siegfried Altmann, and Yassine El Manyari 215

ZeroShop: Automated Metric Mesh Generation for Zero-Shot 6D Object Pose Estimation
Stefan Lechner, Philipp Ausserlechner, and Markus Vincze 220

1D Profiles vs. Spectral Images: A Comparative Study of Machine Learning Models for Mineral and Rock Classification
Sai Puneeth Reddy Gottam, Martin Johannes Findl, Robert Galler, Klaus Philipp Sedlazeck, and Elmar Rueckert 234

Austrian Robotics Workshop 238

Editorial: Austrian Robotics Workshop
Thomas Thurner, Elmar Rueckert, Hubert Zangl, Andreas Müller, Wilfried Kubinger, and Christian Rauch 239

KINESIS: A Schema-Driven Motion Capturing, Management and Augmentation Framework
Hutter Günther 240

Towards Recipe-driven Automation Concepts for Large-scale Food Production
Moritz Dorfer and Michael Rathmair 244

Building a ROS 2 - Isaac Sim Framework for Dual Arm Manipulation of Rigid Objects and Textiles
Jonas Gschnell, Alexander Kitzinger, Hubert Gattringer, and Andreas Müller 248

Embedded Haptic Control for Robotic Grasping using a Tactile Sensor System
Thomas Kammerhofer and Thomas Thurner 252

Peak Force Evaluation for an Active Contact Flange
Bernhard Rameder, Hubert Gattringer, Andreas Müller, and Ronald Naderer 260

Multi-Modal Garment Sorting and Classification Combining Tactile and Visual Sensing
Serkan Ergun, Tobias Mitterer, and Hubert Zangl 264

Semantic Scene Representations 274

Editorial: Semantic Scene Representations
Christian Rauch, Linus Nwankwo, Shail Jadav, and Jun Zhang 275

Enhanced Environmental Context Encoding for Accurate Trajectory Prediction in Intralogistics
Alexander Prutsch and Horst Possegger 281

D²DINO: Dense Descriptors from DINO for Pixel-Level Object Understanding
Paolo Sebeto, Jean-Baptiste Weibel, Christian Hartl-Nesic, and Markus Vincze 286

Overcoming Nature: Perception for Autonomous Navigation in Dense Vegetation
Lukas Wimmer, Andre Koczka, Uros Petrovic, and Gerald Steinbauer-Wagner 296

Spiking Neural Network Systems 301

Editorial: Spiking Neural Network Systems
Bernhard Moser, Michael Lunglmayr, and Robert Legenstein 302

Linearized Bregman Iterations for Sparse Spiking Neural Networks
Daniel Windhager, Michael Lunglmayr, and Bernhard Moser 304

Recurrent versus parallelizable spiking neural networks: A comparative study
Alexander Mayr, Simon Hitzginger, and Robert Legenstein 312

Effective Online SNN Training with One-Step Backpropagation
Saya Higuchi, Federico Corradi, Sander M. Bohté, and Sebastian Otte . . . 320

Probabilistic LIF Neurons Improve Learning in Recurrent Spiking Neural Networks
Sebastian Higuchi, Niels A. Kloosterman, Stefan Hallermann, and Sebastian Otte 326

Working Memory in a Recurrent Spiking Neural Networks With Heterogeneous Synaptic Delays
Laurent Perrinet 331

AI Certification, Fairness and Regulations 341

Editorial: AI Certification, Fairness and Regulations
Bernhard Nessler, Rania Wazir, and Simon Schmid 342

Stochastic Application Domain Definition for Functional Trustworthiness Certification of AI Systems
Simon Schmid, Barbara Brune, Alexander Aufreiter, Lukas Gruber, Kajetan Schweighofer, Xaver Stadlbauer, Thomas Doms, and Bernhard Nessler . . . 346

Conversational Agents in Multi-User Environments
Umut Tanriverdi, Tobias Halmdienst, Simon Schmid, Bernhard Nessler, and Michal Lewandowski . . . 363

Safety Driven Hardware and Control Architecture for Automated Surface Vessel Systems
Önder Hamamcıoğlu, Semih Bajrami, Viktor Komyshan, Gehan Dasanayake, and Mathias Brandstötter . . . 377

Anthropomorphic Terminology in Artificial Intelligence
Iana Kazeeva, Simon Schmid, and Bernhard Nessler . . . 386

Explainable Selection of Machine Learning Algorithms in Social Sciences
Dijana Oreski, Luka Katava, and Alen Kisic . . . 396

Digital Transformation of Agriculture and Animal Science . . . 405

Editorial: Digital Transformation of Agriculture and Animal Science
Sebastian Gruber, Mark A.M. Kramer, Peter Riegler-Nurscher, and Peter M. Roth . . . 406

Vision-based detection of pain and nest-building behaviors in sows within commercial farrowing pens
Peter Helf and Maciej Oczak . . . 409

Online adaptive path planning of UAVs for weed detection
Wolfgang Pitzl, Lukas Lachmann, Raphael Völker, and Peter Riegler-Nurscher 415

Lightweight Classification of Canine Eye Diseases
Isselmou Abdarahmane and Peter M. Roth . . . 420

Measuring the Specific Gravity of Urine of Dogs Using Digital Refractometers
Martina Jezik and Peter M. Roth . . . 424

Interactive VetMap of Austria
Valentina Dolin, Gudrun Kinz, Martina Jezik, Mark A.M. Kramer, and Peter M. Roth . . . 429

Awards of 2025 . . . 434

Index of Authors . . . 435
